

Hi everybody. Welcome to bulletin number 5 for TrashedWorld. This bulletin is all about the partnerships we're building!

Keith Kelly (Sept 19th 2017)

ELTons - We are delighted to have received a nominations for an ELTons award. It quite simply is recognition of all the hard work and the innovation that has gone into the project. We didn't win, but we got to the finals! It's already brought more schools to our programme which is a great result! Keep sharing people!

ELTons 2017 winners and finalists

We are delighted to announce the finalists and winners for this year's ELTons. 2017 was the fifteenth year and the ELTons are the only international awards that recognise and celebrate innovation in English language.

Prometeruse.org - Prometeruse is a climate science education programme with the fantastic goal of getting young people in this important issue AND placing them at the heart of the debate. TrashedWorld and Prometeruse are discussing ways and means of collaborating in offering a joint effort in raising awareness of sustainability in schools and education worldwide.

The Association for Science Education, UK - TrashedWorld has been invited by the UK Association for Science Education to attend their international conference to be held in Liverpool in January 2018. We will give a workshop on TrashedWorld, run an exhibition booth for the duration of the event, and participate in a panel discussion on communicating science.

Collaboration with British Council - The teaching centre at the British Council in Sofia has adopted TrashedWorld for some summer courses with the aim of pairing up groups with teaching centres in Romania and Greece.

Oxford University Press - OUP Teacher training events happen all over the world. We're in discussion with OUP teacher training to look at how TrashedWorld could be exploited as a focus for teacher development events.

Bulgarian English Teachers' Association Conference - TrashedWorld was at the BETA Conference in June in Varna, where the participants brainstormed content and skills for a new unit of work for our platform on the topic of 'Oceans and Seas'. This is a very important area for our planet. We hear more and more how plastics and other waste pollute our waters. Join us and get your students exploring water waste in your area!

Erasmus + - More and more schools are making the most of Erasmus + opportunities available. If you are looking for a focus for your Erasmus+ work, use TrashedWorld! We offer the perfect means for collaboration between schools.

Don't forget, you can send us your students' work and we will publish it on the TrashedWorld website and share your good practice in sustainable education! Let's spread the word around the world! Best regards, Keith
